Good

Overall Org Health

Executive Summary

codeSTREETS B.V.'s Salesforce org scores 71/100 — a solid foundation with targeted improvement areas. The primary risk is security: two non-admin profiles carry Modify All Data permissions. Naming conventions and description completeness are the weakest metadata quality dimensions, with 38% of active flows missing descriptions. Immediate action: remove elevated profile permissions and add descriptions to all active flows.

Domain Score Overview

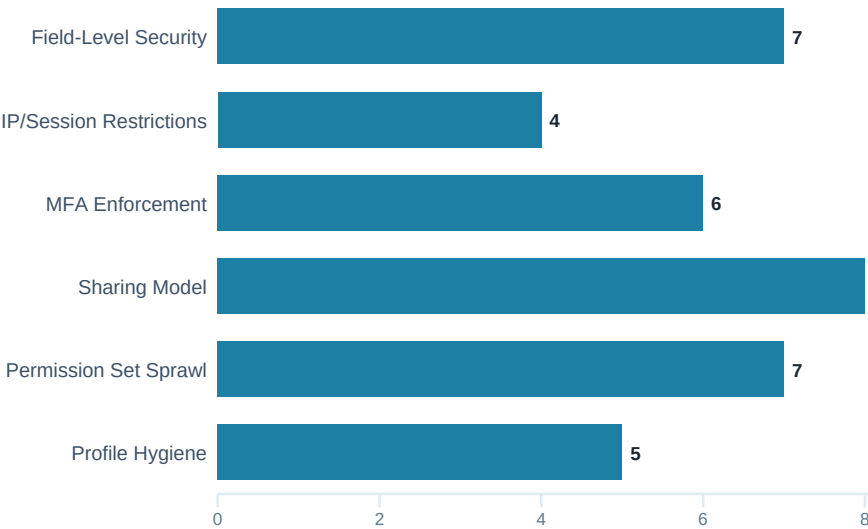

Domain	Weight	Score	Grade	Status
Security & Access	20%	63/100	C	WARN
Data Quality	15%	78/100	B	PASS
Automation Health	15%	69/100	C	WARN
Org Architecture	12%	84/100	A	PASS
Test Coverage	8%	73/100	B	PASS
Naming Conventions	8%	61/100	C	WARN
Orphaned Metadata	8%	72/100	B	PASS
Description Completeness	7%	54/100	D	WARN
Custom Field Sprawl	7%	80/100	A	PASS

Security & Access

Score: 63/100 · Grade: C · Weight: 20%

63
/100

Dimension Breakdown

Dimension	Score (/10)	Status
Profile Hygiene	5/10	WARN
Permission Set Sprawl	7/10	PASS
Sharing Model	8/10	PASS
MFA Enforcement	6/10	WARN
IP/Session Restrictions	4/10	FAIL
Field-Level Security	7/10	PASS

Key Findings

Critical	2 non-System Administrator profiles have PermissionsModifyAllData = true.
High	14 active users have not logged in for 90+ days — deactivate to reduce attack surface.

Data Quality

Score: 78/100 · Grade: B · Weight: 15%

78
/100

Dimension Breakdown

Dimension	Score (/10)	Status
Contact Completeness	8/10	PASS
Account Completeness	7/10	PASS
Lead Hygiene	6/10	WARN
Duplicate Rule Coverage	9/10	PASS
Opportunity Hygiene	7/10	PASS

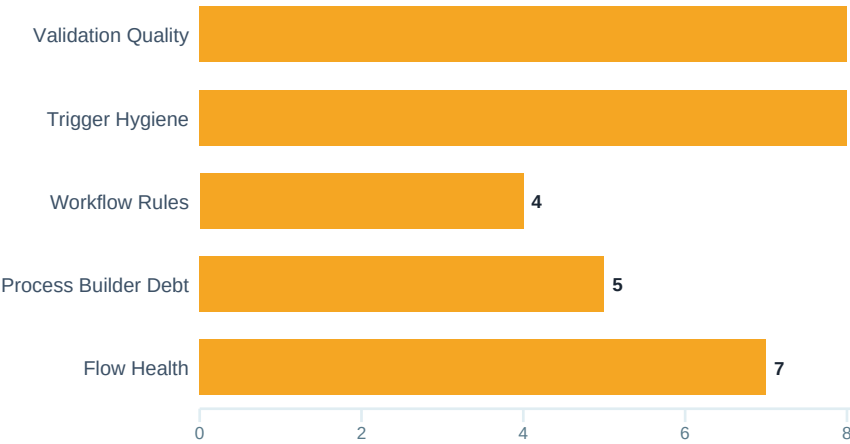

Key Findings

Medium Contact Email null rate is 18% (3,210 of 17,830 contacts unreachable by email).

Automation Health

Score: 69/100 · Grade: C · Weight: 15%

69
/100

Dimension Breakdown

Dimension	Score (/10)	Status
Flow Health	7/10	PASS
Process Builder Debt	5/10	WARN
Workflow Rules	4/10	FAIL
Trigger Hygiene	8/10	PASS
Validation Quality	8/10	PASS

Key Findings

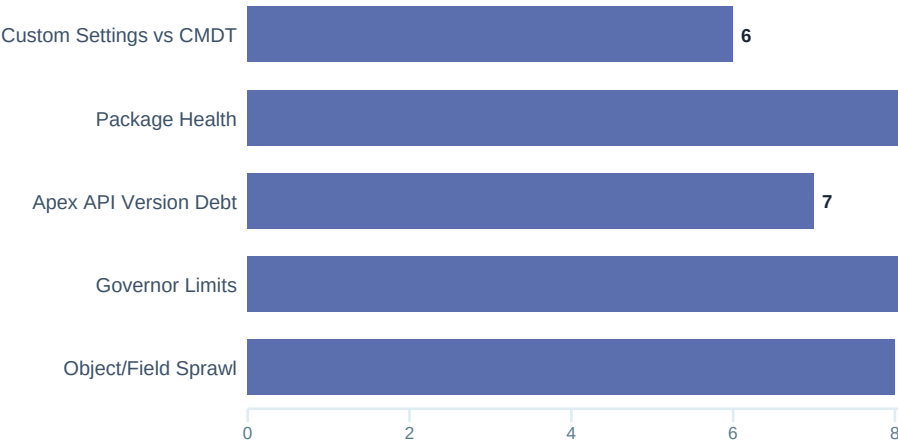

Critical	6 active Workflow Rules detected — retired technology, no Salesforce bug fixes after Winter '23.
Medium	3 active Process Builder processes — migrate to Flow as part of automation modernization.

Org Architecture

Objects 50-99 Fields	7/10	PASS
Stale Fields (>730 days)	8/10	PASS
Duplicate-Purpose Fields	8/10	PASS

Key Findings

High 1 object (Account) at 127 custom fields — review for cleanup

All Key Findings

Severity	Domain	Finding
Critical	Security & Access	2 non-System Administrator profiles have PermissionsModifyAllData = true.
Critical	Automation Health	6 active Workflow Rules detected — retired technology, no Salesforce bug fixes after Winter '23.
High	Security & Access	14 active users have not logged in for 90+ days — deactivate to reduce attack surface.
High	Description Completeness	62% of custom fields are missing InlineHelpText — users cannot understand field purpose.
High	Naming Conventions	32% of Apex classes are missing type suffix (_CTRL, _SERVICE, _TEST, _HANDLER).
Medium	Data Quality	Contact Email null rate is 18% (3,210 of 17,830 contacts unreachable by email).
Medium	Automation Health	3 active Process Builder processes — migrate to Flow as part of automation modernization.
Medium	Test Coverage	4 Apex classes below 75% coverage: OrderSync (48%), PricingHelper (52%), LeadRouter (61%), InvoiceService (64%).
Low	Org Architecture	8 Apex classes on API v45 or below — review for deprecated method usage.

Priority Action Plan

Critical — Act Within 1 Week

1. Remove PermissionsModifyAllData from both non-admin profiles. Use Permission Sets for any legitimate elevated-access requirements.
2. Migrate all 6 Workflow Rules to Record-Triggered Flows. Workflow Rules are retired — no bug fixes or future investment from Salesforce.

Important — Act Within 1 Month

1. Deactivate 14 users with no login in 90+ days — reduces attack surface and frees licenses.
2. Add InlineHelpText to all custom fields missing descriptions — start with the highest-traffic objects.
3. Add type suffixes to the 32% of Apex classes that are missing them (_CTRL, _SERVICE, _HANDLER, _TEST).
4. Add descriptions to all 38% of active flows currently undocumented.

Strategic — Plan for This Quarter

1. Migrate 3 Process Builder processes to Flow as part of the Q3 automation modernization initiative.
2. Run a quarterly naming convention cleanup sprint targeting the worst-offending metadata types.
3. Establish a definition-of-done checklist requiring InlineHelpText and a Description on all new metadata.

Methodology & Audit Metadata

Scoring Weights

Domain	Weight	What It Measures
Security & Access	20%	Profiles, permission sets, sharing model, MFA, login activity
Data Quality	15%	Contact/Account/Lead completeness, duplicates, stale records
Automation Health	15%	Flows, Process Builder, Workflow Rules, Apex triggers
Org Architecture	12%	Governor limits, custom objects, Apex API versions, packages
Test Coverage	8%	Apex test coverage %, classes below 75%, test failures
Naming Conventions	8%	Apex class/trigger naming, field/flow/VR naming standards
Orphaned Metadata	8%	Inactive flows, dead validation/workflow rules, stale fields
Description Completeness	7%	Missing help text on fields, flows, objects, validation rules
Custom Field Sprawl	7%	Objects with 100+ fields, stale fields, duplicate-purpose fields

Grade Scale

Score	Grade	Label	Interpretation
90–100	A+	Excellent	Production-grade org, minimal risk
80–89	A	Strong	Minor improvements recommended
70–79	B	Good	Some areas need attention
60–69	C	Fair	Multiple risk areas identified
50–59	D	Poor	Significant remediation required
< 50	F	Critical	Immediate action required
